Hydrogen Fuel Cell

Check out our **successful (6/6 Objectives Complete)** MS7 full run here!

Aruco Marker Above Battery

Brace For Arm in Up And Down Positions

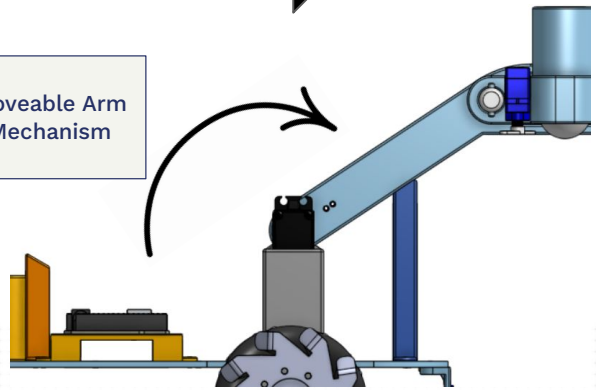

Servo Arm Raises for Mission, Lowers for Course Completion

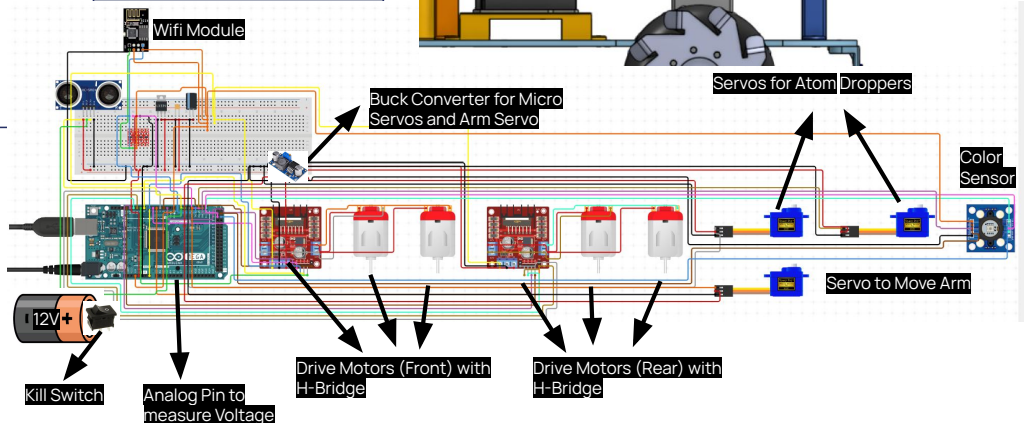

Single Ultrasonic Sensor For Obstacle Detection

Wires Feed Through Hole Under Arduino

Moveable Arm Mechanism

Current situation

Our OTV is able to effectively navigate to the end of the arena, and it does fine with avoiding obstacles. It struggles to orient sometimes, but it is able to complete each mission part other than color sensing effectively.

01 : Mission

- Color Sensor Accuracy

02: Navigation

- Mission Alignment

03: Movement

- Angle Alignment

Obstacles
